EDUCATION

Bachelor of Science in Computer Science **Expected Graduation: May 2027**
New Jersey Institute of Technology *Newark, New Jersey*

- NJIT Highlander Achievement Merit Scholarship Recipient
- Relevant Coursework: Discovering User Needs for UX, Data Structures & Algorithms, Data Science, Database Systems
- Certifications: Machine Learning Foundations – Cornell University

SKILLS

- Programming Languages: Python, SQL, Java, PHP, JavaScript, C/C++
- Frameworks & Databases: React, Node.js/Express, PostgreSQL
- Developer Tools: Tableau, Google Colab, Jupyter Notebook, MySQL, Git/GitHub, Linux, Postman, Figma, Vercel

PROFESSIONAL EXPERIENCE

Artificial Intelligence & Machine Learning Fellow **Sept. 2026 – Present**
Cornell Tech's Break Through Tech AI Studio @ Amazon Web Services *New York City, New York*

- Identified a data leak that let the team's climate-risk model score well without forecasting anything, and reframed the target around the supply chain planner's decision: a **3-month-ahead ENSO forecast**, enough lead time to reroute shipments or build inventory
- **Defined the success metric** for the team's models: beat "next season will look like this one" (0.35 F1), not "always predict normal" (0.13), so a win proves the model tells planners something they couldn't already guess
- Built the forecast's inputs from 18 years of Pacific Ocean buoy data, using **only what planners would know at the time**, so the team's accuracy numbers reflect real-world use, not hindsight

Product Management Extern **Jan. 2026 – Mar. 2026**
BeReal *Remote*

- Analyzed customer sentiment across Reddit, TikTok, and App Store reviews and benchmarked BeReal against Instagram's engagement mechanics, finding **notification timing drove 30–35% of negative sentiment**; prioritized "Unavailable Hours" via RICE analysis, scoring more than 2x the next-highest of 7 concepts
- Wrote **user stories and acceptance criteria**, including edge cases like minimum and maximum blocked time and toggle behavior, to define requirements for a build-ready spec
- Prototyped and user-tested the feature in Figma, designed to keep the daily alert random; **83% of test users** said they'd recommend it to a friend, validating demand for the feature

PROJECTS

GreenRoute | Full-Stack Carbon-Aware Navigation App | *React, Node.js/Express, PostgreSQL, Vercel*

- Rebuilt a hackathon prototype into a **live, full-stack product** with real routing, transit, and geocoding data (no mocked responses), directing the architecture, database, and deployment solo
- Scoped launch to NYC as a **deliberate beachhead market** (dense transit network, real MTA data) while keeping routing and geocoding city-agnostic for future expansion
- Traced 9–10 second load times on slow connections to a heavy map library and code-split it, cutting initial JavaScript **~75%** (348 → 86 kB) on non-map pages with no visual change

LEADERSHIP EXPERIENCE

Undergraduate Tutor **Jan. 2025 – Present**
The Norma J. Clayton Learning Center *Newark, New Jersey*

- Delivered **100+ tutoring sessions** in Calculus, Probability & Statistics, Physics, Python, and Java for students across majors

Saksham Program Manager **Nov. 2022 – Present**
Go Girl Organization *Remote*

- Recruited and trained workshop tutors for Child Rights and You India (CRY), a nonprofit partner; designed coding curriculum used by **2,000+ students** across our four programs
