EDUCATION

Bachelor of Science in Computer Science **Expected Graduation: May 2027**
New Jersey Institute of Technology *Newark, New Jersey*

- NJIT Highlander Achievement Merit Scholarship Recipient
- Relevant Coursework: Discovering User Needs for UX, Data Structures & Algorithms, Data Science, Database Systems.
- Certifications: Machine Learning Foundations – Cornell University

SKILLS

- Programming Languages: Python, SQL, Java, PHP, JavaScript, C/C++
- Frameworks & Databases: React, Node.js/Express, PostgreSQL
- Developer Tools: Tableau, Google Colab, Jupyter Notebook, MYSQL, Git/GitHub, Linux, Postman, Figma, Vercel

PROFESSIONAL EXPERIENCE

Artificial Intelligence & Machine Learning Fellow **Sept. 2026 – Present**
Cornell Tech's Break Through Tech AI Studio @ Amazon Web Services *New York City, New York*

- Completed initial data preprocessing for a **climate-risk forecasting model** addressing supply chain and logistics disruptions caused by **ENSO events**
- Defining **success metrics and data strategy** during project scoping; coordinating with AWS toward a **stakeholder-facing dashboard**
- Preparing to translate model outputs (feature importance, risk thresholds) into actionable insights for a final presentation **to senior executive leadership**

Product Management Extern **Jan. 2026 – Mar. 2026**
BeReal *Remote*

- Conducted multi-platform sentiment analysis (Reddit, TikTok, App Store) and **benchmarked BeReal against Instagram**'s engagement mechanics, finding notification-timing friction drove **~30% of negative sentiment** — the single largest driver of BeReal's MAU churn
- Scoped **"Unavailable Hours"** to block time ranges rather than let users schedule exact posting times — a deliberate trade-off preserving BeReal's spontaneity — selected via RICE analysis with a score **more than 2x the next-highest** of 7 concepts evaluated
- Prototyped and user-tested the feature in **Figma; 83.3%** of test users said they'd recommend it, validating the feature reduced notification-driven distraction without compromising BeReal's identity

PROJECTS

GreenRoute | Full-Stack Carbon-Aware Navigation App | *React, Node.js/Express, PostgreSQL, Vercel*

- Directed the end-to-end rebuild of a hackathon prototype into a **live, full-stack product** with real routing, transit, and geocoding data — no mocked responses — owning **architecture, database design, and deployment** solo
- Scoped the product to **NYC as a deliberate beachhead market** given real transit-data and partner-network constraints, while keeping the underlying routing infrastructure city-agnostic for future expansion
- Diagnosed and resolved a map-performance issue causing a **~9-10 second load time** on slow connections by directing a code-splitting fix, cutting initial page weight **~75%** on non-map pages with zero change to visual design

LEADERSHIP EXPERIENCE

Undergraduate Tutor **Jan. 2025 – Present**
The Norma J. Clayton Learning Center *Newark, New Jersey*

- Delivered 100+ tutoring sessions in STEM courses, improving average student performance by 80%

Saksham Program Manager **Nov. 2022 – Present**
Go Girl Organization *Remote*

- Recruited and trained workshop tutors for Child Rights and You India (CRY), a nonprofit partner, delivering coding programs to **2,000+ students** while ensuring **95% program alignment** and engagement
